

IT Managed Services for Medical Foundation

PROJECT DETAILS

 IT Managed Services, Cybersecurity

 Jan. 2023 - Ongoing

 Confidential

"They consistently go above and beyond to support our mission."

PROJECT SUMMARY

Corporate Technologies provides IT support for a medical foundation. They manage the client's Active Directory, network, on-site infrastructure, cybersecurity, help desk, and disaster recovery.

PROJECT FEEDBACK

Corporate Technologies has improved the client's IT operations, response times, reliability, and system performance. They resolve issues within the same business day and communicate proactively. The team goes above and beyond, working hands-on and volunteering their resources to support the client.

The Client

Please describe your company and position.

I am the Tech Lead of Dakota Medical Foundation

Describe what your company does in a single sentence.

Dakota Medical Foundation prides itself in leading initiatives to create a region of the healthiest people and building the fundraising & service success of charities.

The Approach

How did you find Corporate Technologies?

Referral

Why did you select Corporate Technologies over others?

- High ratings
- Pricing fit our budget
- Good value for cost
- Referred to me
- Company values aligned

Describe the scope of work in detail. Please include a summary of key deliverables.

Corporate Technologies serves as Dakota Medical Foundation's trusted IT partner, providing strategic technology support that enables our staff, nonprofit partners, and community initiatives to operate securely and efficiently. Their work supports not only our internal team but also the technology infrastructure of our multipurpose facility, which hosts tens of thousands of guests and volunteers annually.

- Additionally over the last two years, they have been heavily involved in prepping our new facility that just opened in August 2025. Key deliverables include:
 - Active Directory & Identity Management Administration of user accounts, security groups, and role-based access across systems to ensure secure and compliant access for more than 100+ users and partners.
 - Network & Onsite Infrastructure Management Ongoing maintenance and optimization of our servers, network switches, firewalls, and wireless access points, ensuring high availability and reliable connectivity across our campus.
 - Cybersecurity Monitoring & Protection Regular security assessments, patching, endpoint protection, and threat response to

Corporate Technologies

safeguard sensitive organizational systems and donor data.

- Mission-Critical Event Support Enhanced technical readiness and on-demand IT coverage during major events, including Giving Hearts Day, which drives tens of millions of dollars in charitable giving.
- Corporate Technologies ensures system uptime and responsiveness during these peak operational periods.
- Help Desk & Technical Support Responsive troubleshooting and end-user support with fast resolution times for IT issues ranging from workstation setup to network connectivity.
- Backup, Recovery & Business Continuity Managed backup systems, disaster recovery planning, and failover support to protect critical applications and minimize operational disruption.
- Technology Expansion & Facility Enablement Strategic infrastructure planning and support that enable our growing multipurpose facility to host large-scale programs, trainings, meetings, and community impact initiatives.

The Outcome

What were the measurable outcomes from the project that demonstrate progress or success?

Corporate Technologies has delivered measurable improvements in our IT operations, including faster response times, increased reliability, and stronger system performance. Compared to our previous vendor, where support requests often took several days to receive a response,

Corporate Technologies now resolves most support tickets within the same business day. Their proactive monitoring has also helped reduce system downtime and prevent technical disruptions during high-demand events such as Giving Hearts Day, contributing directly to operational continuity and organizational impact.

Describe their project management. Did they deliver items on time? How did they respond to your needs?

Corporate Technologies

They are meticulous when handling complex technical initiatives such as server maintenance, network infrastructure upgrades, and Active Directory management, ensuring each step is planned, tested, and communicated clearly. For day-to-day support and simpler service tickets, they are fast, responsive, and efficient, often resolving issues within the same business day.

Throughout every engagement, they communicate proactively—providing updates as work progresses, outlining next steps, and ensuring our team is informed and supported from start to finish.

What was your primary form of communication with Corporate Technologies?

- In-Person Meeting
- Email or Messaging App

What did you find most impressive or unique about this company?

What stands out most about Corporate Technologies is the level of partnership and commitment they bring to our organization. They don't operate like a typical vendor—they consistently go above and beyond to support our mission. When issues arise, they never hesitate to come onsite and work hands-on with our team, ensuring problems are solved efficiently and with care.

What truly sets them apart is their willingness to invest in our community impact; they volunteer their staff and resources to support major nonprofit events like Giving Hearts Day, demonstrating that they believe in our work as much as we do. Their reliability, responsiveness, and genuine partnership make them a trusted extension of our team.

Are there any areas for improvement or something Corporate Technologies could have done differently?

One minor area of feedback is that some of the security tools and controls in place—while important and professionally justified—can occasionally feel restrictive to staff during day-to-day work. Overall,

Corporate Technologies

this is a small challenge that I understand is necessary as the Tech Lead at Dakota Medical Foundation, and when security software does impede our work, a quick ticket to the Corporate Technologies help desk resolves the issue.
